

In-Depth Intelligence, ASAP

Virtually all Electronically Stored Information (ESI) leaves a digital trail that can prove vital in legal matters—corporate or criminal. ESI evidence that can be obtained by sifting through the countless 0's and 1's stored on digital media can be the deciding factor in every case or investigation.

When sound digital evidence is the key to your case, you can depend on Mainstream. Our digital forensic experts deliver the most comprehensive analysis and reporting available. Blending smart-target search & collection with the most innovative static data, volatile data, mobile device and network analysis technologies, the forensics service spectrum delivered by Mainstream far exceeds the basic acquisition capabilities of most providers.

Mainstream's combination of protocol and technology not only provides efficient acquisition and analysis, but also correlates network communications data to:

- Validate suspected internal wrongdoing
- Identify network anomalies
- Build a comprehensive, evidence-based case
- Provide a full 360-degree picture of what happened and who was involved.

Contact Mainstream Professional Services for assistance with:

- Intellectual Property Theft Detection
- HR Investigations
- Malware Reverse Engineering
- Fraud Detection and Investigation

E-discovery Services

Our experts employ a quick and cost-effective process to meet your litigation support needs, including official chain of custody, evidence tracking, case management, secure storage and delivery of relevant information. Mainstream's proven methodologies ensure evidence remains sound and admissible from beginning to end:

- Collection and Preservation
- Processing and Culling
- On-line Hosting Legal Review
- Expert Witness Testimony
